

Testing Report

AI Workspace Platform

Functional Testing Results

Module / Area	Testing Performed	Testing Result	Notes / Issues	Status
9. Manual Functional Testing	Login Logout Session handling Accessing the workspace after authentication	Result: The authentication workflow was successfully tested. Status: Passed	—	Tested
10. Workspace Management	Create workspace Open workspace Switch between workspaces Edit workspace Clone workspace Archive workspace View archived workspaces Share workspace	Result: Workspace management functionality was successfully tested. The available workspace management actions worked through the interface. Status: Passed	—	Tested
11. AI Assistant Configuration	Create assistant Configure assistant name Configure system prompt Configure temperature Save assistant settings Verify assistant in the assistant list Check Live Preview	Result: Assistant configuration was successfully tested. The assistant settings could be configured and saved successfully. Status: Passed	—	Tested
12. Persistent Chat	Create conversation Select assistant Send messages	LLM Testing: The Chat module was tested using both Mock and Gemini	—	Tested

	Receive AI responses Verify conversation history Search conversations Pin messages Export conversations Check model information Check token information Check response time	providers. When Gemini was not configured, the application correctly used the Mock Provider. After Gemini was configured, the application generated a real response using: Model: gemini-2.5-flash Provider: Gemini Result: Status: Passed		
13. Knowledge Base / Document Intelligence	Upload PDF Process document Generate document chunks Embed document Check embedded status Check chunk count Generate document summary Perform semantic search Check relevance scores Ask grounded questions Verify document citations	Grounded Question: What are the main features and user roles of the EMS system? Result: The assistant successfully returned information about: Super Admin Tenant Admin Employee Multi-Tenancy Task Management Attendance Analytics Billing Security Notifications Offline Support Department Management Bulk Employee Import The response included citations	Document Used: EMS Project Overview.pdf	Passed

		referring to the uploaded document chunks.		
14. Long-Term Memory	Add memory Select memory category Pin memory Unpin memory Search memory Edit memory Delete memory Recall stored information through Chat	Memory Recall Test: A memory item was stored and subsequently queried through the assistant. The stored information could be recalled when the memory functionality was active.	Important Observation: Memory-related reasoning through the actual LLM depends on the selected provider. The Mock Provider does not perform genuine memory-based reasoning.	Passed for the tested functionality
15. Prompt Library	Create Prompt Edit Prompt Delete Prompt Duplicate Prompt Favorite Prompt Filter Favorites Search Category filtering Database persistence API integration Use in Chat	Retest: After the fix: Prompt loads into Chat. Prompt appears in the editable input. User can modify the prompt. Prompt can be sent. AI response is generated. Correct workspace/assistant context is maintained. Result: Status: Passed after fix	Use in Chat Issue: During initial testing, the Use in Chat functionality showed inconsistent sending/response behavior. The issue was subsequently fixed.	Tested
16. Dashboard and Analytics	After performing actions such as: Creating conversations Uploading documents Creating prompts Running AI Skills the Dashboard	Result: Dashboard information and displayed analytics were checked during manual testing. Status: Tested	—	Tested

	was checked for workspace activity and available analytics.			
17. Advanced Features	—	Result: The available advanced features were manually tested through the interface. Status: Tested	—	Tested
18. Dark Mode Testing	—	Retest: The Dark Mode functionality was tested again after the fix. Result: The selected theme persisted during the tested navigation/refresh scenarios. Status: Passed after fix	Issue Identified: During testing, the selected Dark Mode could turn off during navigation or refresh. Fix: Theme persistence was implemented so that the selected theme persists through normal navigation and refresh using the implemented persistence mechanism.	Tested
19. Error Handling	—	Result: Status: Passed	—	Tested
20. Issues Identified and Resolved	—	—	Issue 1 — Prompt Library: Use in Chat: Problem: Prompt could be loaded into Chat, but sending/response behavior was inconsistent. Resolution: The Use in Chat workflow was fixed and manually	Tested

			retested. Final Status: ☒ Resolved Issue 2 — Dark Mode Persistence: Problem: Dark Mode could turn off during navigation or refresh. Resolution: Theme persistence was implemented and the workflow was retested. Final Status: ☒ Resolved Issue 3 — LLM Provider Selection: Problem: The application could fall back to the Mock Provider when Gemini was not correctly configured. Resolution: The LLM provider configuration/factory was corrected so that Gemini is selected when properly configured, while Mock remains the fallback when no external API key is available. Final Status: ☒ Resolved	
21. Overall Functional Testing Summary	—	—	Module Final Status Authentication ☒ Passed Workspace Management ☒ Passed	Tested

			Assistant Configuration ☒ Passed Persistent Chat ☒ Passed Gemini Integration ☒ Passed Knowledge Base ☒ Passed Document Intelligence ☒ Passed Long-Term Memory ☒ Passed Prompt Library ☒ Passed Use in Chat ☒ Fixed & Passed AI Skills ☒ Passed Dashboard ☒ Tested Analytics ☒ Tested Workspace Sharing ☒ Tested Voice Input ☒ Tested Speech Output ☒ Tested Conversation Export ☒ Tested Dark Mode ☒ Fixed & Passed Error Handling ☒ Passed	
22. End-to-End Workflow Verification	—	—	The following integrated workflow was manually demonstrated: Authentication → Workspace →	Tested

			Assistant Configuration → Chat → Gemini AI → Document Upload → Embeddings → Semantic Search → Document Q&A → Citations → Memory → Prompt Library → AI Skills → Dashboard The application successfully demonstrated real AI interaction using Gemini as well as controlled Mock Provider fallback behavior when an external API key was unavailable.	
23. Relationship Between Controlled Experiments and Manual Testing	—	—	The controlled experiments and manual testing serve different purposes. The controlled experiments evaluate specific AI/application behaviors under defined conditions, including the limitations of the Mock Provider. Manual testing validates the integrated application workflow through the actual user interface. Therefore, the manual testing results should be considered additional functional	Tested

			verification rather than a replacement for the original controlled experiment results.	
24. Final Assessment	—	—	Based on the controlled experiments and manual functional testing performed, the core AI Workspace Platform functionality was successfully verified. The platform demonstrated working functionality across: - Authentication - Workspace Management - AI Assistant - Configuration - Persistent Chat - Gemini Integration - Knowledge Base - Document Intelligence - Long-Term Memory - Prompt Library - AI Skills - Dashboard and Analytics - Advanced Features - Error Handling Previously identified issues involving Prompt Library → Use in Chat, Dark Mode persistence, and LLM provider configuration were addressed and retested. The platform is	Tested

			therefore functionally ready for the remaining assignment-level verification activities.	
25. Remaining Assignment-Level Verification	—	—	The following items are separate from the manual functional testing documented above and should only be marked complete when their actual evidence is available: 20+ automated tests and recorded pass results 40 evaluation scenarios and recorded results - Formal security review - Formal performance analysis - Research report - Architecture documentation - Database schema documentation - Installation/README documentation - Deployment - Live URL - GitHub repository verification - Final screenshots - Known limitations These deliverables should be supported by their respective test files, measurements, reports, screenshots,	Tested

			repository information, or deployment evidence.	
26. Conclusion	—	—	The AI Workspace Platform underwent both controlled experimentation and extensive manual functional testing. The manual testing confirmed the major user workflows, while the controlled experiments documented the behavior of the platform under defined testing conditions. The successful Gemini integration, document-grounded question answering, AI Skills execution, workspace functionality, Prompt Library workflow, memory functionality, dashboard behavior, and advanced features demonstrate that the core platform is operational. The identified functional issues were fixed and retested where applicable. Final Functional Status: ☒ Core Functionality Verified Note: This report documents the testing actually performed.	Tested

			Assignment-level claims such as automated-test counts, 40 evaluation scenarios, formal security/performance analysis, and deployment should only be marked complete once their corresponding evidence has been produced and verified.

Overall Functional Testing Summary

Module	Final Status
Authentication	Passed
Workspace Management	Passed
Assistant Configuration	Passed
Persistent Chat	Passed
Gemini Integration	Passed
Knowledge Base	Passed
Document Intelligence	Passed
Long-Term Memory	Passed
Prompt Library	Passed
Use in Chat	Fixed & Passed
AI Skills	Passed
Dashboard	Tested
Analytics	Tested
Workspace Sharing	Tested
Voice Input	Tested

Speech Output	Tested
Conversation Export	Tested
Dark Mode	Fixed & Passed
Error Handling	Passed
